THE AWARD

Named for The Associated General Contractors of America's 1991 President Marvin M. Black – an ardent supporter of the partnering process – the Marvin M. Black Excellence in Partnering Awards are presented annually to construction projects that epitomize the principles of partnering and the successful collaborations that work to improve construction projects.

Now in its second decade, the Marvin M. Black Excellence in Partnering Awards celebrate successful partnerships and years of outstanding results from such collaborations. Since 1992, the AGC member firms in good standing that have received this prestigious award stand out for their proficiency in the following areas: achieving a common goal, honoring all stakeholders, resolving conflict, improving communication on the project with all audiences, celebrating joint successes, incorporating team-building activities, and most importantly perpetuating the partnering process.

For more information about the Marvin M. Black Excellence in Partnering Awards, go to www.agc.org/awards.

Peoria, AZ

Ames Construction, Inc., City of Peoria

Lake Mary Road Improvement Project

Flagstaff, AZ

Vastco, Inc.

Lower Tualatin Pump Station

Tualatin, OR

Natt McDougall Company

2011 WINNERS

I-15 North Corridor Design-Build Project | North Corridors Constructors | Las Vegas, NV |
a CH2M Hill/Las Vegas Paving Corporation Joint Venture

This project served as the first design-build contract for the Nevada Department of Transportation, and included widening a 5.8 mile section of Interstate 15 in Las Vegas, reconstructing interchanges, 16 bridges and 17 miles of concrete barrier rail. Through close collaboration with the DOT, the project team implemented a number of innovations that reduced the project's duration by 228 days, improved the quality of work, increased safety and reduced costs. The project was completed under heavy traffic flow and within a tight urban footprint, and required close coordination with the City of Las Vegas and the City of North Las Vegas, a dozen utility providers, several local businesses and more than one thousand residents.

SR 202L Red Mountain Freeway Design-Build | Phoenix, AZ | Kiewit/Sundt, A Joint Venture

This \$190 million project was the Arizona Department of Transportation's largest design-build project to date and the third largest overall, and consisted of widening 10 miles of the freeway through Phoenix and Tempe, adding general purpose and auxiliary lanes, widening 22 bridges, and reconstructing 18 ramps. While portions of the project spanned protected wetlands and Tempe Town Lake, the team completed the design and construction eight months ahead of schedule and \$9 million below budget. The team held two separate partnering workshops for design and construction to discuss project goals and potential issues, and stakeholders attended weekly design and construction status meetings to provide input for the project. The team logged approximately 700,000 man hours with zero lost time incidents.
