

AGC's *Building to LEED*® for New Construction Course

Are You Prepared to Successfully Deliver a LEED Project?

AGC of America's *Building to LEED for New Construction* course provides an overview of the LEED rating system with a focus on the information contractors need most to effectively and efficiently construct green buildings. In addition, course participants will gain an in-depth understanding of the different roles construction professionals play on a LEED project—from owners to supervisors and project managers to estimators.

Course Learning Objectives

- Define the role of buildings and their impact on the environment
- Identify the major changes in LEED for New Construction, from LEED v2.2 to LEED 2009
- Differentiate the credit categories in the LEED for New Construction rating system
- Discuss the credits and prerequisites in LEED 2009 for New Construction and their impact on construction practices
- Develop strategies specifically focused on the contractor's role in supporting green building design and construction on a project seeking certification under LEED v3

AGC's *Building to LEED*® for New Construction course is based on the second edition of the course materials, released August 18, 2010, and is based on the U.S. Green Building Council's (USGBC®) LEED 2009 for New Construction and Major Renovations™ rating system.

Building to LEED courses are offered nationwide through select AGC chapters, individual construction firms and educational institutions. Visit the AGC website for course dates and locations.

Who Should Attend AGC Building to LEED Courses?

This full-day course will benefit general and specialty contractors and construction professionals currently working on or planning to work on LEED projects. This course is especially helpful for those preparing to use the rating system for the first time.

About the Course

USGBC developed Leadership in Energy and Environmental Design (LEED®) Green Building Rating Systems for different applications, such as New Construction and Major Renovations, Commercial Interiors, Core and Shell, and Homes. AGC of America's course materials focus on LEED 2009 for New Construction and Major Renovations.

Select courses may be approved for 7.5 Green Building Certification Institute™ (GBCI) Continuing Education Hours. These hours help to fulfill the credentialing maintenance hours required of those holding LEED® AP and Green Associate™ credentials.

About AGC | AGC is the leading association for the construction industry. Founded in 1918, AGC is a full-service national trade association with a nationwide network of chapters. AGC represents more than 33,000 firms including 7,500 of America's leading general contractors, nearly 12,500 specialty contractors and more than 13,000 service providers and suppliers.

Building to LEED courses are offered nationwide through select AGC chapters, individual construction firms and educational institutions. Visit the AGC website for course dates and locations.
