

A Fresh Look

at California's New In-Use Off-Road Diesel-Fueled Fleets Regulation

December 3, 2009

Michael E. Kennedy, Esq. General Counsel Associated General Contractors of America 2300 Wilson Boulevard, Suite 400 Arlington, VA 22201 Direct: 703-837-5335 Email: kennedym@agc.org

California's New In-Use Off-Road Diesel-Fueled Fleets Regulation

- Approved in July 2007
- Established reporting requirements that took effect in April (large fleets), June (medium fleets) and August (small fleets) of 2009
- Established fleet average requirements that will take effect in March of 2010 (large fleets), 2013 (medium fleets) and 2015 (small fleets)
- Applies to four industry categories but just one of the four (Construction and Mining) accounts for at least 80% of the covered pieces of equipment

Scope of Review and this Presentation

- 2000 Emissions Inventory
- 2009 Emissions Inventory
- Similarities and Differences in the Results
- Implications for the Rule
- Final Note

- Baseline values for calendar year 2000 (Surveys and Studies)
 - Total Population of Equipment (Each Type)
 - Age Distribution of Equipment (Each Type)
 - Horsepower Distribution (Each Type)
- OFFROAD model projections for future years
 - Constant rate of annual growth in population, equal to nearly 2% for "Construction and Mining" category

- The Economic Context
 - Period of steady growth in California GDP originating in construction
 - Positive growth in 9 of the 12 years beginning in 1993 and running through 2004
 - Annual rates varied widely, falling as low as
 -0.6% but climbing as high as 7.8%
 - Cumulative growth of 14.2% (\$5.2B) from 1993 to 1997 and another 25.1% (\$11B) from 1997 to 2005

Real GDP Originating in California Construction Industry 1993-2005

Source: Bureau of Economic Analysis, U.S. Department of Commerce

- The Economic Context
 - Also period of steady growth in total employment in California's construction industry
 - Positive growth in all 12 years beginning in 1993 and running through 2004
 - Annual rate reached 15.6% in 1998, but otherwise ranged between 0.9% and 8.4%
 - Cumulative growth of 104% (479,000 jobs)

2000 Emissions Inventory for NOx

- Based on available data, OFFROAD model estimated 419 tons per day (tpd) in 2000
- OFFROAD model then projected steadily declining rate of emissions through 2025
 - Down 22.4% (to 325 tpd) by 2009
 - Down anywhere from 4.3% to 8% per year from 2010 to 2025
 - Down a cumulative total of 68.2% (to 103.2 tpd) between 2009 and 2025

2000 Emissions Inventory for NOx

2000 Emissions Inventory for PM

- Based on available data, OFFROAD model estimated 25 tpd in 2000
- OFFROAD model then projected steadily declining rate of emissions through 2025
 - Down 30% (to 17.5 tpd) by 2009
 - Down anywhere from 4.6% to 10.2% per year though 2025
 - Down a cumulative total of 76% (to 4.2 tpd) between 2009 and 2025

2000 Emissions Inventory for PM

- New regulation's reporting requirements took effect between April and August of 2009
- Opportunity to take fresh look at emissions inventory
- Embedded in DOORS data are 2009 values for three key inputs
 - Total Population of Equipment (Each type)
 - Age Distribution of Equipment (Each Type)
 - Horsepower Distribution (Each Type)

- As did CARB, AGC relied on OFFROAD model
 - No modifications or adjustments
- AGC merely substituted DOORS data provided on September 26, 2009
- OFFROAD model estimates for 2009
- OFFROAD model projections for future years

- The Economic Context
 - Three years of sharp decline in real GDP originating in construction
 - Erased all gains made in the preceding 12 years
 - Construction industry contracted 4.5%, 14.5% and 12.2% in 2006, 2007 and 2008, respectively
 - Cumulative drop of 28.4% (15.5B) in real GDP from 2005 to 2008

2009 Emissions Inventory for NOx

- Based on DOORS data, OFFROAD model estimates 239.1 tpd in 2009
- OFFROAD model then projects steadily declining rate of emissions through 2025
 - Down anywhere from 5.2% to 8.3% per year through 2025
 - Down a cumulative total of 70% (to 71.6 tpd) between 2009 and 2025

NOx Emissions From Regulated Fleets (Tons Per Day)		
	2009	
Year	Inventory	
2009	239.1	
2010	222.5	
2011	210.9	
2012	199.9	
2013	189.3

2020	4.94	
2021	4.41	
2022	3.91	
2023	3.44	
2024	3.04	
2025	2.71	

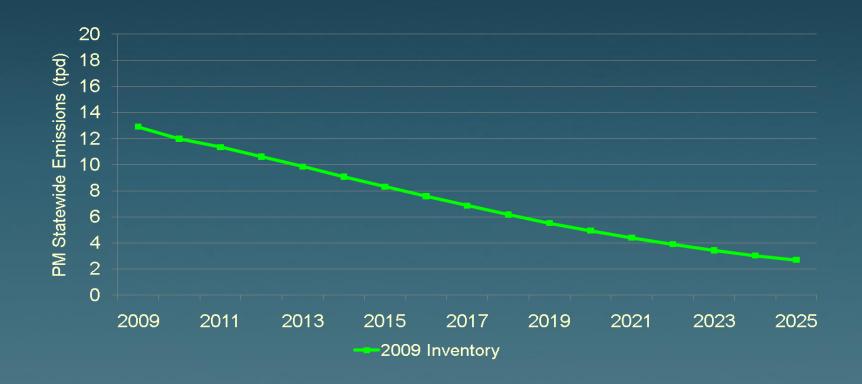

2009 Emissions Inventory for PM

- Originally projected decline in rate of emissions in each year between 2009 and 2025 on the low side but not terribly wide of the mark
 - Originally projected to drop 4.3% to 8% in each year from 2009 to 2025
 - Now projected to drop 5.2% to 8.3% drop in each of these years

NOx Emissions From Regulated Fleets (Tons Per Day)

	2000	2009	
Year	Inventory	Inventory	Delta
2009	325.0	239.1	-85.9
2010	311.0	222.5	-88.5
2011	294.6	210.9	-83.7
2012	278.6	199.9	-78.7
2013	262.8	189.3	-73.5
2014	246.0	177.1	-68.9
2015	227.5	163.9	-63.6
2016	209.9	151.5	-58.4
2017	193.3	139.5	-53.8
2018	177.8	128.1	-49.7
2019	164.0	117.6	-46.4
2020	150.8	108.0	-42.9
2021	139.6	99.3	-40.3
2022	128.8	91.1	-37.7
2023	119.3	83.5	-35.8
2024	110.7	77.1	-33.6
2025	103.2	71.6	-31.6

- Originally projected decline in rate of emissions over entire period on the low side, but again, pretty close to the mark
 - Originally projected to drop cumulative total of 68.3%
 - Now projected to drop cumulative total of 70%

NOx Emissions
From Regulated Fleets
(Tons Per Dav)

	2000	2009	
Year	Inventory	Inventory	Delta
2009	325.0	239.1	-85.9
2010	311.0	222.5	-88.5
2011	294.6	210.9	-83.7
2012	278.6	199.9	-78.7
2013	262.8	189.3	-73.5
2014	246.0	177.1	-68.9
2015	227.5	163.9	-63.6
2016	209.9	151.5	-58.4
2017	193.3	139.5	-53.8
2018	177.8	128.1	-49.7
2019	164.0	117.6	-46.4
2020	150.8	108.0	-42.9
2021	139.6	99.3	-40.3
2022	128.8	91.1	-37.7
2023	119.3	83.5	-35.8
2024	110.7	77.1	-33.6
2025	103.2	71.6	-31.6

- Originally projected decline in rate of emissions between 2000 and 2009 quite wide of the mark
 - Originally projected to drop 22.4% (from 419 tpd to 325 tpd) over these nine years
 - Actually dropped 42.9% (from 419 tpd to 239.1 tpd) during this period
 - 2000 inventory overstated rate of emissions in 2009 by 35.9% (85.9 tpd)

NOx Emissions
From Regulated Fleets
(Tons Per Dav)

Year	2000 Inventory	2009 Inventory	Delta
2009	325.0	239.1	-85.9
2010	311.0	222.5	-88.5
2011	294.6	210.9	-83.7
2012	278.6	199.9	-78.7
2013	262.8	189.3	-73.5

Comparison of Inventories for PM

- Legal implications
 - Necessary and cost effective?
 - Anticipated future emissions?
 - Potential adverse health effects?
 - Economic feasibility?
 - Less costly alternatives that would achieve the same increments of environmental protection within the same timeframe?

The ISOR (in April of 2007):

"Between 2007 and 2009, construction valuation is expected to increase over 10 billion dollars"

The best evidence currently available:

By the end of 2008, real GDP originating in California's construction industry had already dropped \$13B from its peak in 2006.

The ISOR (in April of 2007):

"[T]he California construction industry is expected to add about 8,000 jobs per year from 2006 to 2014."

The best evidence currently available:

At the end of October of 2009, seasonally adjusted employment in the California construction industry was down to its lowest level since June of 1998. It had dropped for 31 consecutive months. The industry had lost 326,000 jobs, or 34.7 percent of its total workforce.

The ISOR (in April of 2007):

"Staff expects many affected businesses would pass through the regulation's costs to their customers. This could be achieved, for example, through higher bids for construction projects"

The best evidence currently available:

The cost of construction is down. Competition is fierce, and in most cases, bids are significantly lower than owners expected two years ago. According to the U.S. Bureau of Labor Statistics, the cost of construction across the country dropped 7.4% from August of 2008 to August of 2009.

Implications for the Rule

- Core policy questions
 - How driven by the data?
 - Opportunities that it presents?
 - How to stay the course and still reduce the economic burden on a devastated industry?

Original Target for NOx

- Regulation calibrated to drop rate of NOx emissions well below originally expected levels
 - Down to 323.3 tpd in 2009
 - Down anywhere from 6.0% to 14.9% per year in each of next 14 years
 - Down to 83.6 tpd in 2023 and subsequent years
 - Down a cumulative total of 73.2% (to 83.6 tpd) between 2009 and 2025

NOx Emissions
From Regulated Fleets
(Tons Per Day)

(1011	or Cr Day)
Year	Original Target
2009	323.3
2010	298.4

2019	119.7
2020	102.9
2021	95.5
2022	89.7
2023	83.6
2024	83.6
2025	83.6

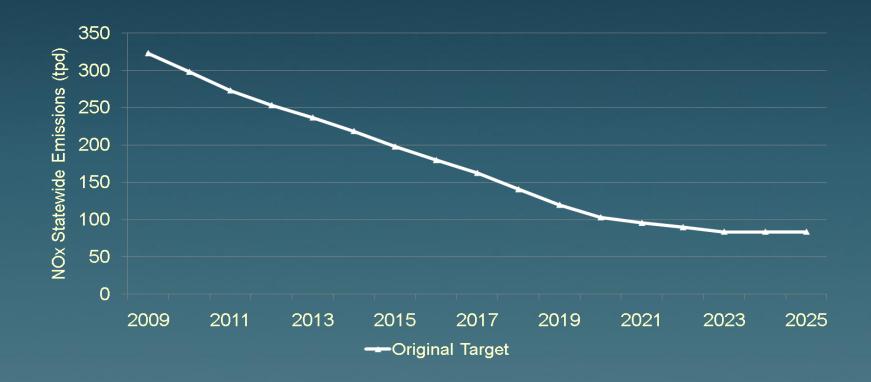

Original Target for NOx

Original Target for PM

- Regulation calibrated to drop rate of PM emissions well below originally expected levels
 - Down to 17.34 tpd in 2009
 - Down anywhere from 6.6% to 37.3% per year in each of next 12 years
 - Down to a low of 1.26 tpd in 2021
 - Down a cumulative total of 92.4% (to 1.3 tpd) between 2009 and 2025

PM Emissions

2015	4.60	8.32	3.72
2016	3.83	7.59	3.75
2017	3.34	6.87	3.53
2018	3.09	6.17	3.09
2019	2.89	5.53	2.64
2020	1.81	4.94	3.13
2021	1.26	4.41	3.15
2022	1.28	3.91	2.63
2023	1.29	3.44	2.15
2024	1.30	3.04	1.74
2025	1.31	2.71	1.40

• 2009 projections still higher than targeted rates for subsequent years

PM Emissions From Regulated Fleets (Tons Per Day)

Voor	Original	2009	Delta
Year	Target	Inventory	
2009	17.30	12.90	-4.40
2010	14.40	12.00	-2.40
2011	11.69	11.35	-0.34
2012	8.62	10.61	1.99
2013	7.21	9.85	2.64
2014	5.84	9.08	3.24
2015	4.60	8.32	3.72
2016	3.83	7.59	3.75
2017	3.34	6.87	3.53
2018	3.09	6.17	3.09
2019	2.89	5.53	2.64
2020	1.81	4.94	3.13
2021	1.26	4.41	3.15
2022	1.28	3.91	2.63
2023	1.29	3.44	2.15
2024	1.30	3.04	1.74
2025	1.31	2.71	1.40

- But again, reductions needed to meet targeted rates are just a fraction of reductions originally thought necessary
 - Less than half in 4 of these years
 - Just over half (between 50% and 60%)
 in 8 of these years
 - Closer to two-thirds (but never more than 63%) in only 2 of these years

Reductions in PM Emissions From Regulated Fleets (Tons Per Day)

(Tolls I of Day)				
Year	Reductions Originally Needed	Reductions Still Needed		
2009	-0.15	0.00		
2010	-2.34	0.00

2023	-27.27	-10.41
2024	-24.49	-11.05
2025	-29.53	-11.57

How 2009 Inventory for PM Compares with Original Target For Cumulative Reductions

A Final Note on the Outlook for the Construction Industry . . .

- tends to lag behind the rest of the economy
- typically trails rest of economy both into and out of recession
- can take many years to recover from a serious downturn

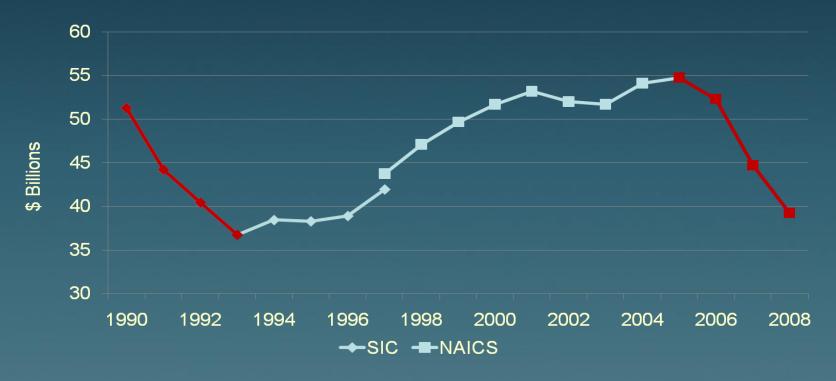

Real GDP Originating in California Construction Industry 1990-2008

Source: Bureau of Economic Analysis, U.S. Department of Commerce

A Final Note on the Outlook for the Construction Industry . . .

- Current downturn in the California construction industry already worse than 1990 -1993
 - Real GDP originating in California construction industry expected to fall again in 2009
 - Well into fourth year of declining employment
 - Still looking for the bottom

A Final Note on the Outlook for the Construction Industry . . .

- Significant impediments to recovery
 - huge government deficits
 - risk of a collapse in commercial mortgage market
- Business opportunities difficult to identify

Thank you.
